

## What does this module do?

It changes in real time and completely automated the references of the orders by the id's of these.

Replaces the complicated reference of orders type: "IYVMVB" with a simpler type "01542".

The module retroactively applies the changes, updating the references of all orders.

## Installation

- 1) Upload the module.
- 2) Install.
- 3) The module will make the necessary changes retroactively, the references will be updated automatically.
- 4) Modify the position of the hook: "actionValidateOrder", and put in first position the Module of References of orders in id's.**

## Use in the Back Office

It does not need additional configuration.
